

INTERNSHIP REPORT PRESENTATION

CodeAlpha Virtual Internship in Full Stack Development

Prabhat Kumar Jha

Roll No: 25SCS1003004567 | Section: 2CSE36

B.Tech CSE, IILM University

July 10, 2026 – August 10, 2026

Presentation Agenda

A structured overview of my learning journey, project implementations, and key takeaways during the 4-week internship.

About CodeAlpha

- ▶ **Govt. Recognized:** Software development organization recognized by the Ministry of MSME, Govt. of India.
- ▶ **Mission:** Operating under the motto "Your Dream Our Passion," providing structured learning.
- ▶ **Leadership:** Led by Founder & CEO Swati Srivastava, focusing on industry-relevant skills.
- ▶ **Methodology:** Emphasizes bridging the gap between theoretical knowledge and practical software engineering.

Core Internship Objectives

First Principles

Master the fundamentals of full-stack development, responsive UI design, and RESTful API integration from the ground up.

E-Commerce System

Design and deploy a complete E-commerce Store featuring dynamic product listings, secure authentication, and cart management.

Social Platform

Architect "CampusLoop," a dynamic social media platform tailored for students with interactive feeds and profile management.

Project 1: E-Commerce Store

A fully functional digital storefront designed to provide a seamless user shopping experience. The project bridged complex frontend interfaces with robust backend data management.

Key implementations included asynchronous data fetching, dynamic DOM manipulation for real-time cart updates, and robust error handling for secure user credential processing.

System Architecture

Client & Middleware Layer

Frontend: HTML/CSS and vanilla JS. Utilized ``api.js`` for authenticated, asynchronous Fetch API requests.

Routing: Express.js middleware handling ``authRoutes``, ``cartRoutes``, and ``productRoutes`` for secure session credential processing.

Database & Environment

Storage: Local SQLite databases (``store.db``) maintaining persistent, structured records for users and inventory.

Dev Environment: Structured utilizing Visual Studio Code (IDE) and Git for systematic version control and asset management.

Project 2: CampusLoop

An interactive social networking platform exclusively architected for student communities to share updates and connect via specific interest circles.

The platform features a premium navigation interface, a real-time responsive search bar for filtering posts, dynamic user avatars, and session logout functionality.

Technology Stack

Frontend Engineering:

HTML5, CSS3, and modern JavaScript (ES6+), focusing heavily on dynamic DOM Manipulation.

Backend Server:

Node.js runtime environment paired with Express.js for robust middleware and routing configuration.

Database Management:

SQLite relational databases implemented for both e-commerce transactions and social media persistent data.

Development Tooling:

Visual Studio Code as the primary IDE, integrated with Git (`.git`) for continuous version control.

Development Lifecycle

Key Achievements

2

Major Applications Built

Expected Outcomes Achieved

Successfully managed multi-tiered directory structures (public assets, server routes) in a professional development environment.

Demonstrated proficiency in writing asynchronous JavaScript (`async/await`) for seamless backend data integration.

“ The gap between theoretical computer science and practical engineering is bridged only through hands-on development. ”

Core Learning Philosophy

Thank You!

I am now open to questions regarding the internship projects.
